

Transaction Data Migration

Select, migrate and copy documents
easily and simply

Starting Position

In your company you already use SAP ERP for your service processes, or you probably want to implement them in your system. However, you are not quite satisfied with the functionality of the SAP standard? With SAP ERP Module Customer Service (=CS) in-house repairs and services, as well as the complete documentation about the delivery of customers' devices, shipment of rental equipment, repair till return delivery and invoicing can be made traceable. However, the SAP Standard has some weak points, due to which most of the companies cannot avoid Z-developments or additional manual work.

After many years of experience in the field of repair and service development with SAP ERP and drawing from our individual need, we have developed an add-on which will make your service processes simpler.

Transaction Data Migration by abilis

In this context, abilis has developed for a while range of transaction data this SAP add-on, which allows for copying current documents in the new organizational units.

You can specify which documents should be copied with the help of a number of selection and filter criteria. The following transaction data can be created with this add-on:

- Client orders
- Client delivery schedules
- Orders

Your Benefits

- ☑ Simple operability: Thanks to the simple selection and setting of filters, it is easy to use the migration and copy tools.
- ☑ Error minimization: Thanks to the various plausibility checks, which you have when performing the migration and copying, and the possibility to manually check and edit all fields within one transaction, the user errors are minimized.
- ☑ Time saving: Make the migration of your organizational units more efficient, thus increasing the capacity of your employees.
